

MIMIC DRIVER BUR-200

Autoprime Interactive Fire Detection System Product Datasheet

Features

- 1 Mimic Driver is capable of driving 32 current limited LEDs
- 1 Mimic Driver is provided with 8 standard monitored inputs
- A maximum of 8 Mimic Drivers can be connected to the RS-485 Panel Bus, providing a total of 256 outputs and 64 monitored inputs
- Powered by 24 VDC, redundant, monitored
- Lamp test
- LED intensity control
- Snap-on to DIN rail (TS-35)
- Designed to meet EN 54 and SOLAS requirements, and conforms to CE standards

Application/Description

The BUR-200 is a Mimic Driver hat is capable of driving 32 LEDs with series resistors on a mimic panel for additional indication of alarms. In addition, 8 standard monitored inputs can be used to reading various switches.

The Mimic Driver is connected to the RS-485 Panel Bus.

Power redundancy is achieved by using a daisy-chain connection with master and slave drivers.

Switch Settings

RS-485 termination and board mode switch.

Switch	Description
S2.1	RS-485 3 Failsafe termination
S2.2	(see description below)
S2.3	RS-485 3 Line termination
S2.7	BUR-200 Master/Slave select (ON: Master, OFF: Slave)

Switch Settings Failsafe and line Termination

Master and the last* Slave: The switches S2.1, S2.2 and S2.3 are to be set to ON.

Other Slaves: The switches S2.1, S2.2 and S2.3 are to be set to OFF.

*Refer to connection Overview – Master/Slave Drivers.

X2 Panel Bus Address Switch

If S2.7 is set to Master, X2 sets the panel bus address. If S2.7 is set as a slave, X2 sets the RS-485 daisy-chain slave address. The range for the switch is 1-9.

Technical specifications	
Dimensions (mm)	181 x 125 x 40
Weight	300
Materials	Polyamid / aluminium
Mounting	On DIN-rail (TS-35)
Operating temperature	- 15 °C to + 70 °C
Storage temperature	- 40 °C to + 70 °C
Humidity	0 to 95% non-condensing
Power supply	24 VDC (18-32V)
Current consumption	Maximum 25 mA
Total load BUR-200	Maximum 500 mA
Communication	RS-485 panel bus

Part number	Description
116-BUR-200	Mimic Driver BUR-200

J12		Optional functions
	7	
	6	
		*1 To enable Light Intensity Control : move jumper 8 to position 2-3 for outputs 1-8
		Move jumper 9 to position 2-3 for outputs 9-16
		Move jumper 10 to position 2-3 for outputs 17-24
		Move jumper 11 to position 2-3 for outputs 25-32
	5	Light intensity control by pot.meter *1 Light intensity control is enabled as default.
	4	Option: Shorting 3 to 4 activates all outputs (Lamp Test)
	3	
	2	Normally closed. The wires from an external power supply's fault relay output can be connected to 1 and 2, replacing the jumper. A break in this circuit path makes the panel signal a fault in the system.
	1	Total loss of power will be signalled in the system as a missing panel.
